RE: Firon 28KV 900 Amp Switch Cat#DIS28900S

Guelph Hydro currently uses Firon double insulator 28KV 900 Amp switch (cat SES28900S) for isolation. Our line staff find the Firon switch easy to install and remove. They also like the versatile range of the switch (3/0- 556).

The other important factor is the reduced costs of not having to purchase Amp Taps, which is not required with the Firon switch.

If you require any further information regarding the installation and performance of the switch, please contact our Line Supervisor, Luch Depieri, at 519-212-3728.

Sincerely,

Jim Simas

RE: Firon 35KV 900 amp Switch #DIS35900S

Waterloo North Hydro is currently using the Firon 35kv 900 amp switch for isolation . We are in the trail stage now and only using them as temp. devices. We have 12 switches and have installed and removed them from service for both planned work and emergency work.

Pros

Waterloo likes these switches

- a) Versatile range of conductor size. (3/0 - 556)
- b) No extra parts.(eg. No amps or connectors.)
- c) Easy to use temp wire holder to hang it on the wire.

Our guys in the field like the switch operation. (blade opens and closes easily). They also say they are very quick and easy to install in the field.

For emergency work they like the fact that one switch works for all conductor sizes in our system.

Because of the positive response from our Journeyman we will be looking to trying these switches in permanent locations.

Yours truly

John Kernick
